Eliminator®

Virtually
Any Gun,
Any Load

Selected by Field & Stream magazine as one of 2010's Best of the Best, the Eliminator is guaranteed to bring a smile to even the most experienced hunter. In a split second, the Eliminator determines the distance to your target, calculates your trajectory and illuminates the perfect holdover. It's that simple. **Just Range, Aim, and Eliminate.**

Accuracy That Is Off the Chart

With an expanded range of ballistic charts, the Eliminator significantly extends the range and accuracy of centerfire and rimfire rifles, muzzleloaders and slug guns. Now, nothing is safe from the Eliminator. Big game, small game, varmints...even tin cans.

Three simple programming steps let you match the ballistics of your ammunition to the trajectory compensating capabilities within the Eliminator LaserScope. This means you...

Eliminate the need for a hand-held laser rangefinder.

Eliminate the loss of crucial seconds fumbling with other optics and rangefinders.

Eliminate the need for guessing or estimating hold-over on longshots.

Eliminate the chances of missing the trophy of a lifetime due to lack of confidence.

Eliminate aiming errors with the 1/3 MOA illuminated aiming dot.

The Eliminator features a balanced design and integrated mounting system that mounts low on any firearm. Touch the remote activation switch and within a split second the range to the target and holdover is displayed on the scope's reticle. Then, place the red dot where you want to place your shot and pull out your tag.

REMOTE ACTIVATION

For maximum efficiency and fingertip control, a remote activation switch – included with the Eliminator – can be attached to the rifle's forearm or the scope's objective bell.

STRONG, LOW MOUNTING

The unique mounting system allows the lowest possible mounting of the LaserScope to the rifle.

Rimfire, Slug Gun, Muzzleloader or Centerfire. Take your pick because the new Eliminator LaserScope includes expanded ballistic charts for thousands of loads for centerfire rifles, muzzleloaders, slug guns and rimfire cartridges.

Sophisticated Technology Made Simple, Simple, Simple.

Simply enter one of the 123 drop numbers into the Eliminator. In a split second, the Eliminator factors in the distance, the angle of the shot, and the ballistics of your cartridge or load, and presents a lighted dot for the perfect holdover.

Ballistics Tables Made Simple

All you need to know is the drop in inches at 200 yards when sighted-in at 50 yards, or the drop in inches at 500 yards when your cartridge is sighted-in for 100 or 200 yards. Burris provides this 'drop number' for more than 1,900 commercial cartridges. With your drop number established, you decide if you need or prefer to sight-in at 50, 100 or 200 yards.

Programming Made Simple

1. First, push the Main Button (left side of scope) to turn on the electronics. Then push the Main Button once more to get three dashes (— — —) in the range area.
2. Next, push the Forward Arrow button (right side of scope) then the Main Button. Hold simultaneously for 6 seconds to enter Set-Up Mode.
3. Select either (Y)ards or (M)eters, press the forward button.
4. Select a (0) 50 yard sight-in, (1) 100 yard sight-in distance or (2) 200 yard sight-in distance, then press the forward button.
5. Select the two-digit Drop Number (04 thru 90) and press the back button. You're done!

Precision Made Simple

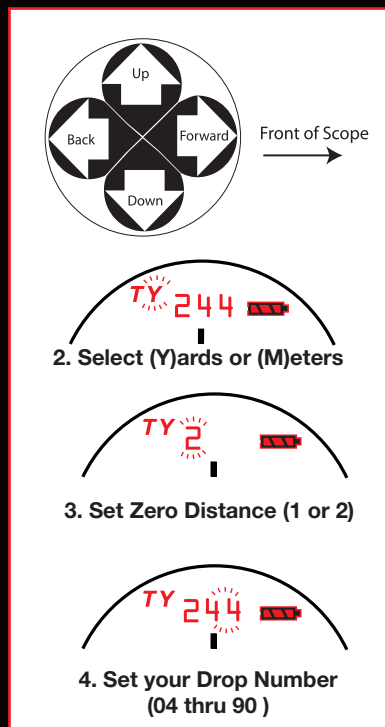

Sight-in your gun at your selected sight-in distance of either 50, 100 or 200 yards. Then verify point of impact by actual shooting at 200 or 500 yards. Depending on the exact ammo performance, your gun's barrel length, the elevation, and any extreme temperatures, you might need to increase or decrease your Drop Number by a couple of digits for exacting performance.

Life Made Simple

Your programming is stored in the scope no matter the condition of your battery and it will still remember your programming with no battery at all.

The Hunt Made More Enjoyable and Successful

The Burris Eliminator LaserScope is in a league of its own. No other riflescope combines this level of quality, technology, accuracy, simplicity, repeatability and effectiveness. It will greatly increase the distance at which you can be confident in making an ethical shot. You do the hunting and shooting, the Eliminator will do the memorizing and calculating.

LaserScope 4x-12x-42mm

Laser Range* (yards reflective)	800
Laser Range* (yards deer)	550+
Laser Accuracy	+/- 1 yard
Battery	CR-2
Battery Life	1100 cycles
Operating Temperature	14F - 122F
Field of View	25-9
(Low-High feet @ 100 yards)	
Exit Pupil (mm) Low - High	10.5 - 3.5
Click Value (Inch @ 100 yards)	.25
Max Adj. (Inch @ 100 yards)	50
Weight with mount & battery	26 oz
Optimum Eye Relief (Inch)	3 - 3.5
Objective End Dia (mm)	60
Clear Objective Dia (mm)	42
Ocular End Dia (mm)	39
Overall Length (Inch)	13
Mounting Rail Length (Inch)	5.7
*Environmental conditions may limit range
